Non-planar vibrations of benzene, Foil A. Miller and Bryce L. Crawford, Jr.—282

Of metal-ammonia solutions, Richard A. Ogg, Jr.—114(L)

On the dissociation energies CO, N_2, NO, and CN, J. G. Valatin—568(L)

On the force constants of the XY_2 molecule, Delia M. Simpson—294(L), Comment on, Geo. Glockler and Jo-Yun Tung—294(L)

Predissociations in nitric oxide, Paul J. Flory and H. L. Johnston—212

Rotational structure of some electronic bands of chlorine dioxide, Jesse B. Coon—665

Spectrophotometric studies on solubilization of hydrocarbons, W. Heller and H. B. Klevens—567(L)

Theoretical evaluation of normal frequencies of vibration of the isomeric octanes, Charles O. Ahonen—625

Ultraviolet of

Ammonia, intensities of electronic transitions, Robert J. Thompson and A. B. F. Duncan—573

Fluorbenzene in the near ultraviolet, S. H. Wollman—123

Ozone, W. H. Eberhardt and W. Shand, Jr.—525

Pyridine vapor in the near ultraviolet, H. Sponer and Hildegard Stücklen—101

Toluene vapor in the near ultraviolet, Nathan Ginsberg, W. W. Robertson, and F. A. Matsen—511

Accommodation coefficients

For heat conduction between gas and bright platinum, for nine gases between 80°K (or their boiling points) and 380°K, Edward R. Grilly, William J. Taylor, and Herrick L. Johnston—435

Interpretation of pressure dependence of accommodation coefficients, J. L. Morrison—466(L)

Pressure dependence of, I. Amdur—339

Adsorption (see **Surface Phenomena**)

Apparatus and Methods

Experimental determination of the intensities of infrared absorption bands. I Theory of the method, E. Bright Wilson, Jr., and A. J. Wells—578

Improved hot wire cell for accurate measurements of thermal conductivities of gases over a wide temperature range. Results with air between 87° and 375°K, William J. Taylor and Herrick L. Johnston—219

Preparation of mixed thallium bromide-iodide for infrared transmissions, O. F. Tuttle and P. H. Egli—571(L)

Simple method of obtaining a particle mass distribution of inverting the x-ray intensity scattered at small angles, L. C. Roess—695

Ultrasonic propagation in liquids: I. Application of pulse technique to velocity and absorption measurements at 15 megacycles, J. R. Pellam and J. K. Galt—608

Use of punched cards in molecular structure determinations. I. Crystal structure calculations, P. A. Shaffer, Jr., Verner Schomaker, and Linus Pauling—648

Use of punched cards in molecular structure determinations. II. Electron diffraction calculations, P. A. Shaffer, Jr., Verner Schomaker, and Linus Pauling—659

Catalysis
Nitrogen and stearic acid adsorption by supported and unsupported catalysts, Herman E. Ries, Jr., Marvin F. L. Johnson, and John S. Melik—465(L)

Chemical Reactions (see **Kinetics of Reactions**)

Conductance
Conductometric investigation of electrolytic solutions in hydrocarbons, Andrew Gemant—424
Electronic shifts at moderate temperatures in metals of Group VIII, W. R. Ham and C. H. Samans—464(L)
Improved hot wire cell for accurate measurements of thermal conductivities of gases over a wide temperature range. Results with air between 87° and 375°K, William J. Taylor and Herrick L. Johnston—219
Thallous sulfide photo-conductive cells. I. Experimental investigation, A. von Hippel, F. G. Chesley, H. S. Denmark, P. B. Ulin, and E. S. Rittner—355
Thallous sulfide photo-conductive cells. II. Theoretical discussion, A. von Hippel and E. S. Rittner—370
Thermal conductivities of eight common gases between 80° and 380°K, Herrick L. Johnston and Edward R. Grilly—233

Crystal Structure
Of polonium, William H. Beamer and Charles R. Maxwell—569(L)
Of synthetic boehmite, Paul P. Reichertz and W. Jacque Yost—495
Synthetic Patterson maps, A. D. Booth and Dorothy Wrinch—503(L)
Use of punched cards in molecular structure determinations. I. Crystal structure calculations, P. A. Shaffer, Jr., Verner Schomaker, and Linus Pauling—648
X-ray diffraction investigation of the thermal decomposition of silver oxalate, R. L. Griffith—408

Crystalline State
Corresponding states in the frozen rare gases, G. W. Murphy and O. K. Rice—518
Investigation of oxidation of copper by use of radioactive Cu tracer, J. Bardeen, W. H. Brattain, W. Shockley—714
Preparation of mixed thallium bromide-iodide for infrared transmissions, O. F. Tuttle and P. H. Egli—571(L)
Site of reaction in direct photographic development, T. H. James—536
Some thermodynamic constants for the solution processes of atoms in metallic solvents, Sheng-Nien Wang—643
Thermodynamic properties and potential energy of solid argon. II, O. K. Rice—321
X-ray diffraction investigation of the thermal decomposition of silver oxalate, R. L. Griffith—408

Deuterium (see **Isotopes**)

Diffusion
Errata: statistical mechanics of transport processes. I. General theory, John G. Kirkwood—347
Loci of emulsion polymerization: diffusion of organic molecules from emulsion droplets through an aqueous phase into polymer latex particles, William D. Harkins and Richard S. Stearns—215(L)
Loci of emulsion polymerization: The diffusion of organic molecules from emulsion droplets through an aqueous phase into soap micelles, Richard S. Stearns and William D. Harkins—214(L)
Of vapors through polymers, Paul Doty—244
Statistical mechanical theory of transport processes. I. General theory, John G. Kirkwood—180. See also Errata—347
Time-dependence of boundary tensions of solutions. I. The role of diffusion in time-effects, A. F. H. Ward and L. Tordai—453

Elasticity
Creep under constant load in tension, Paul J. Blatz and Arthur V. Tobolsky—113(L)
Elastic loss and relaxation times in cross-linked polymers, John G. Kirkwood—51
New approach to the theory of relaxing polymeric media, M. S. Green and A. V. Tobolsky—80
Stress-time-temperature relations in polysulfide rubbers, M. D. Stern and A. V. Tobolsky—93

Electrochemistry
A proposed interpretation of the zeta-potential, Lawrence Robinson—721
Conductometric investigation of electrolytic solutions in hydrocarbons, Andrew Gemant—424
Efficiency of the electrolytic separation of potassium isotopes, Dwight A. Hutchison—401
Electrical potential at the interface between vitreous silica and solutions of barium chloride, Lloyd A. Wood and Lawrence B. Robinson—251
Jones-Ray effect, wettability, and zeta-potential, Hans M. Cassel—462(L)
Photoelectric effect in metal-ammonia solutions, Richard A. Ogg, Jr.—295(L)
Test of Langmuir's interpretation of the Jones-Ray effect, Lloyd A. Wood and Lawrence B. Robinson—258

Electron Affinity
Of amide radical and the chemical stability of metal-ammonia solutions, Richard A. Ogg, Jr.—399(L)

Electron Diffraction
Investigation of dimethylketene dimer, William N. N. Lipscomb and Verner Schomaker—475
Investigation of the molecular structure of thioacetic acid, Walter Gordy—560
Scattering of electrons by hydrocarbon films, J. Karle—297
Use of punched cards in molecular structure determinations. II. Electron diffraction calculations, P. A. Shaffer, Jr., Verner Schomaker and Linus Pauling—659

Electron Microscopy
Scattering of electrons by hydrocarbon films, J. Karle—297

Energy Transfer
Accommodation coefficients for heat conduction between gas and bright platinum, for nine gases between 80°K (or their boiling points) and 380°K, Edward R. Grilly, William J. Taylor, and Herrick L. Johnston—435
Errata: statistical mechanics of transport processes. I. General theory, John G. Kirkwood—347
Interpretation of pressure dependence of accommodation coefficients, J. L. Morrison,—466(L)
Mass spectrometric study of CH_3D dissociation probabilities of C—H and C—D bonds by electron impact, M. W. Evans, N. Bauer, and J. Y. Beach—701
Mercury Photosensitized Reactions
Between hydrogen and oxygen, David Volman—707
Between hydrogen and nitrous oxide, H. Austin Taylor and Norman Zwiebel—539
Of 1-butene and 2-butene, H. E. Gunning and E. W. R. Steacie—581
Of diethyl ether, B. deB. Darwent, E. W. R. Steacie, and A. F. van Winckel—551
Of isobutene, H. E. Gunning and E. W. R. Steacie—544
Of propylene and isoprene, H. E. Gunning and E. W. R. Steacie—57
Notes on the rate process theory of flow, A. Bondi—591
Note on the theory of diffusion controlled reactions with application to the quenching of fluorescence, Elliott W. Montroll—202
Pressure dependence of accommodation coefficients, I. Amdur—339
Statistical mechanical theory of transport processes. I. General theory, John G. Kirkwood—180; see also Errata:—347

Fluorescence
Note on the theory of diffusion controlled reactions with application to the quenching of fluorescence, Elliott W. Montroll—202
Free Rotation (see **Rotation**)

Glasses
Studies on glass. XVIII. The heats of solution of crystalline and glassy glucose; the heat of mutarotation of α-glucose, Robert D. Rowe and George S. Parks—383

Heat Capacity (see **Thermodynamic Properties**)
Hindered Rotation (see **Rotation**)

Infra-Red Spectra (see **Absorption Spectra**)
Intensities of Spectra
Asymmetric rotor. III. Punched-card methods of Constructing band spectra, Gilbert W. King, Paul C. Cross, and George B. Thomas—35
Experimental determination of the intensities of infra-red absorption bands. I. Theory of the method, E. Bright Wilson, Jr. and A. J. Wells—578
Infra-red spectra of *p*-benzene-d_2 and *p*-benzene-d_4, Foil A. Miller and Bryce L. Crawford, Jr.—292
Intensities of electronic transitions in ammonia, Robert J. Thompson and A. B. F. Duncan—537
Motions of molecules in condensed systems: I. Selection rules, relative intensities, and orientation effects for Raman and infra-red lines, Ralph S. Halford—8
Motions of molecules in condensed systems. II. The infra-red spectra for benzene solid, liquid, and vapor in the range from 3 to 16.7μ, Ralph S. Halford and Oliver A. Schaeffer—141

Isotopes
Chemical forms assumed by C^{14} produced by neutron irradiation of nitrogenous substances, P. E. Yankwich, G. K. Rollefson, and T. H. Norris—131
Efficiency of the electrolytic separation of potassium isotopes, Dwight A. Hutchison—401

Kinetics of Reactions
Chemical forms assumed by C^{14} produced by neutron irradiation of nitrogenous substances, P. E. Yankwich, G. K. Rollefson, and T. H. Norris—131
Copolymerization of systems containing three components, Turner Alfrey and George Goldfinger—115(L)
Decomposition of gaseous aluminum trimethyl, Lourdu M. Yeddanapalli and Clarence C. Schubert—1
Efficiency of the electrolytic separation of potassium isotopes, Dwight A. Hutchison—401
General theory of the reaction loci in emulsion polymerization. II, William D. Harkins—47(L)
Heat-capacity lag in gas dynamics, Arthur Kantrowitz—150
Investigation of oxidation of copper by use of radioactive Cu Tracer, J. Bardeen, W. H. Brattain, W. Shockley—714
Kinetics of OH radicals as determined by their absorption spectrum. VI. Attempt to trace OH radicals in the thermal hydrogen-oxygen reaction, O. Oldenberg, J. E. Morris, C. T. Morrow, E. G. Schneider, and H. S. Sommers, Jr.—16
Loci of emulsion polymerization: diffusion of organic molecules from emulsion droplets through an aqueous phase into polymer latex particles, William D. Harkins and Richard S. Stearns—215(L)
Loci of emulsion polymerization: the diffusion of organic molecules from emulsion droplets through an aqueous phase into soap micelles, Richard S. Stearns and William D. Harkins—214(L)
Mass spectrometric study of CH_3D dissociation probabilities of C—H and C—D bonds by electron impact, M. W. Evans, N. Bauer, and J. Y. Beach—701
Mercury Photosensitized Reactions
Between hydrogen and nitrous oxide, H. Austin Taylor and Norman Zwiebel—539
Between hydrogen and oxygen, David Volman—707
Of 1-butene and 2-butene, H. E. Gunning and E. W. R. Steacie—581
Of diethyl ether, B. deB. Darwent, E. W. R. Steacie, and A. F. van Winckel—551

Kinetics of Reactions (*continued*)
Of isobutene, H. E. Gunning and E. W. R. Steacie—544
Of propylene and isoprene, H. E. Gunning and E. W. R. Steacie—57
Note on the theory of diffusion controlled reactions with application to the quenching of fluorescence, Elliott W. Montroll—202
Reaction of methyl radicals with butadiene and isoprene, H. E. Gunning and E. W. R. Steacie—534
Site of reaction in direct photographic development, T. H. James—536
Statistical mechanics of linear association equilibria, Paul J. Flory—49(L)
The theory of the racemization of optically active derivatives of diphenyl, F. H. Westheimer and Joseph E. Mayer—733
Ultra-high frequency denaturation of proteins, Geo. A. Boyd—351(L)
X-ray diffraction investigation of the thermal decomposition of silver oxalate, R. L. Griffith—408

Large Molecules (see **Polymers**)

Light Scattering
Determination of particle sizes from Tyndall spectra, W. Heller, H. B. Klevens, and H. Oppenheimer—566(L)
Determination of polymeric molecular weights by light scattering in solvent-precipitant systems, R. H. Ewart, C. P. Roe, P. Debye, and J. R. McCartney—687
Of high polymer solutions, Jurg Waser, Richard M. Badger, and Verner Schomaker—43
Tyndall spectra, their significance and application, Wilfried Heller and Etienne Vassy—565(L)

Liquids
Absorption isotherms for hydrogen-bounded liquids on charcoal, D. H. Volman and I. M. Klotz—642(L)
Adiabatic compressibility of liquids, M. Rama Rao—699(L)
Density and thermal expansion of liquid phosgene, C. N. Davies—48(L)
Liquid association and critical temperature, Frank Brescia—501
On phase changes of Bose-Einstein fluid models, Louis Goldstein—276
On the weak associations in water and in aniline, R. Parshad—348
Thermodynamic properties of liquid argon, O. K. Rice—324
Ultrasonic propagation in liquids: I. Application of pulse technique to velocity and absorption measurements at 15 megacycles, J. R. Pellam and J. K. Galt—608
Ultrasonic propagation in liquids: II. Theoretical study of the free volume model of the liquid state, Charles Kittel—614

Mechanics, Classical
Asymmetric rotor. III. Punched-card methods of constructing band spectra, Gilbert W. King, Paul C. Cross, and George B. Thomas, 35.
Comment on "on the force constants of the XY_2 molecule," Geo. Glockler and Jo-Yun Tung—294(L)
Electric circuit models for the vibration spectrum of polyatomic molecules, Gabriel Kron—19
Network analyzer tests of equivalent circuits of vibrating polyatomic molecules, G. K. Carter and G. Kron—32
Non-planar vibrations of benzene, Foil A. Miller and Bryce L. Crawford, Jr.—282
On steric effects, Terrell L. Hill—465(L)
On the force constants of the XY_2 molecule, Delia A. Simpson—294(L)
Superficial density of the energy of natural vibrations, A. Barger and A. Schuchowitzky—569(L)
Theoretical evaluation of normal frequencies of vibration of the isomeric octanes, Charles O. Ahonen—625
Upper and lower bounds to Rayleigh's frequency for a vibrating system, Wm. J. Taylor—570(L)

Mechanics, Quantum
Bond hybridization in the non-tetrahedral carbon atom, John E. Kilpatrick and Ralph Spitzer—463(L)
Classical models and many-electron atoms, Melvin A. Cook—62
Energy levels and thermodynamic functions for molecules with internal rotation. II. Unsymmetrical tops attached to a rigid frame, Kenneth S. Pitzer—239
Force constant of the association bond in the formic and acetic acid dimers, J. O. Halford—395
Intensities of electronic transitions in ammonia, Robert J. Thompson and A. B. F. Duncan—573
Motions of molecules in condensed systems: I. Selection rules, relative intensities, and orientation effects for Raman and infra-red lines, Ralph S. Halford—8
Motions of molecules in condensed systems. II. The infra-red spectra for benzene solid, liquid, and vapor in the range from 3 to 16.7μ, Ralph S. Halford and Oliver A. Schaeffer—141
Predissociations in nitric oxide, Paul J. Flory and H. L. Johnston—212
On phase changes of Bose-Einstein fluid models, Louis Goldstein—276
On steric effects, Terrell L. Hill—465(L)
Relation between internuclear distances and potential barriers of methyl groups, F. A. French and R. S. Rasmussen—389
Tetrahedral P_4 molecule, James R. Arnold—351(L)
Theory of the non-tetrahedral carbon atom, George H. Duffey—342

Mechanics, Statistical
Application of the methods of molecular distribution to solutions of large molecules, Bruno Zimm—164
Copolymerization of systems containing three components, Turner Alfrey and George Goldfinger—115(L)
Corresponding states in the frozen rare gases, G. W. Murphy and O. K. Rice—518
Elastic loss and relaxation times in cross-linked polymers, John G. Kirkwood—51
Errata: Statistical mechanics of transport processes, I. General theory, John G. Kirkwood—347

Mechanics, Statistical (*continued*)
Force constant of the association bond in the formic and acetic acid dimers, J. O. Halford—395
Heat-capacity lag in gas dynamics, Arthur Kantrowitz—150
Intrinsic viscosity of polymer-solutions, P. Debye—636
New approach to the theory of relaxing polymeric media, M. S. Green and A. V. Tobolsky—80
Note on communal entropy. Remarks on a paper by Henry S. Frank, O. K. Rice—348(L)
Notes on the rate process theory of flow, A. Bondi—591
Of linear association equilibria, Paul J. Flory—49(L)
On phase changes of Bose-Einstein fluid models, Louis Goldstein—276
Postscript to the foregoing note by O. K. Rice, Henry S. Frank—350(L); see also: Note on communal entropy. Remarks on a paper by Henry S. Frank, O. K. Rice—348(L)
Proposed interpretation of the zeta-potential, Lawrence Robinson—721
Statistical mechanics of multimolecular adsorption. I, Terrell L. Hill—263
Statistical mechanics of multimolecular adsorption. II. Localized and mobile adsorption and absorption, Terrell L. Hill—441
Theory of multimolecular adsorption from a mixture of gases, Terrell L. Hill—46(L)
Theory of multimolecular adsorption from a mixture of gases, Terrell L. Hill—268
Theory of the racemization of optically active derivatives of diphenyl, F. H. Westheimer and Joseph E. Mayer—733
Statistical mechanical theory of transport processes. I. General theory, John G. Kirkwood—180; see also Errata—347
Thermodynamic properties and potential energy of Solid argon. II., O. K. Rice—321
Thermodynamic properties of liquid argon, O. K. Rice—324
Ultrasonic propagation in liquids. II. Theoretical study of the free volume model of the liquid state, Charles Kittel—614

Metals
Electronic shifts at moderate temperatures in metals of Group VIII, W. R. Ham and C. H. Samans—464(L)

Molecular Films (see **Surface Phenomena**)

Molecular Spectra (see **Absorption Spectra and Fluorescence**)

Molecular Structure and Constants
Accommodation coefficients for heat conduction between gas and bright platinum, for nine gases between 80°K (or their boiling points) and 380°K, Edward R. Grilly, William J. Taylor, and Herrick L. Johnston—435
Bending force constants for halogenated ethylenes, Kenneth S. Pitzer and N. K. Freeman—586
Bond hybridization in the non-tetrahedral carbon atom, John E. Kilpatrick and Ralph Spitzer—463(L)
Comment on "on the force constants of the XY_2 molecule, Geo. Glockler, and Jo-Yun Tung—294(L)
Electron diffraction investigation of the molecular structure of thioacetic acid, Walter Gordy—560
Electron diffraction investigation of dimethylketene dimer, William N. Lipscomb and Verner Schomaker—475
Force constants of ozone, George Glockler and George Matlack—531
Force constant of the association bond in the formic and acetic acid dimers, J. O. Halford—395
Geometry of the molecules CH_3Cl and CH_3Br, Börge Bak—698(L)
Intensities of electronic transitions in ammonia, Robert J. Thompson and A. B. F. Duncan—573
Interpretation of pressure dependence of accommodation coefficients, J. L. Morrison—466(L)
Improved hot wire cell for accurate measurements of thermal conductivities of gases over a wide temperature range. Results with air between 87° and 375°K, William J. Taylor and Herrick L. Johnston—219
Liquid association and critical temperature, Frank Brescia—501
Mass spectrometric study of CH_3D dissociation probabilities of C—H and C—D bonds by electron impact, M. W. Evans, N. Bauer, and J. Y. Beach—701
Notes on the infra-red spectrum and molecular structure of ozone, Arthur Adel and David M. Dennison—379
On steric effects, Terrell L. Hill—465(L)
On the dissociation energies CO, N_2, NO, and CN, J. G. Valatin—568(L)
On the force constants of the XY_2 molecule, Delia M. Simpson—294(L)
On the structure of ozone, W. H. Eberhardt—641(L)
On the weak association in water and in aniline, R. Parshad—348(L)
O—O bond energy in hydrogen peroxide, George Glockler and George Matlack—504(L)
Predissociations in nitric oxide, Paul J. Flory and H. L. Johnston—212
Pressure dependence of accommodation coefficients, I. Amdur—339
Relation between bond force constants, bond orders, bond lengths, and the electro-negativities of the bonded atoms, Walter Gordy—305
Relation between bond multiplicity and interatomic distance, R. T. Lagemann—743(L)
Relation between internuclear distances and potential barriers of methyl groups, F. A. French and R. S. Rasmussen—389
Rotational structure of some electronic bands of chlorine dioxide, Jesse B. Coon—665
Structure of ozone, George Glockler and George Matlack—505(L)
Tetrahedral P_4 molecule, James R. Arnold—351(L)
Theoretical evaluation of normal frequencies of vibration of the isomeric octanes, Charles O. Ahonen—625
Theory of the non-tetrahedral carbon atom, George H. Duffey—342
Theory of the racemization of optically active derivatives of diphenyi, F. H. Westheimer and Joseph E. Mayer—733

Molecules Structure and Constants (*continued*)
Thermal conductivities of eight common gases between 80° and 380°K, Herrick L. Johnston and Edward R. Grilly—233
Thermodynamic properties and potential energy of solid argon. II, O. K. Rice—321
Thermodynamic properties of liquid argon, O. K. Rice —324

Phase Transitions
Recognition of phase transitions in adsorbed films on solids, D. H. Bangham—352(L)
Surfaces of solids. XVII. First- and second-order phase change in the adsorbed film of *n*-heptane on graphite, George Jura, William D. Harkins, and Edward H. Loeser—344
Surfaces of solids. XV. First-order phase changes of adsorbed films on the surfaces of solids: the film of *n*-heptane on ferric oxide, George Jura, Edward H. Loeser, Paul R. Basford, and William D. Harkins— 117

Photochemistry
Free radical determination in biacetyl photolysis, Ralph G. Ascah, Milton Burton, John E. Ricci, and Thomas W. Davis—487
Kinetics of OH radicals as determined by their absorption spectrum. VI. Attempt to trace OH radicals in the thermal hydrogen-oxygen reaction, O. Oldenberg, J. E. Morris, C. T. Morrow, E. G. Schneider, and H. S. Sommers, Jr.—16
Mercury Photo-Sensitized Reaction
Between hydrogen and oxygen, David Vomlan—707
Between Hydrogen and nitrous oxide, H. Austin Taylor and Norman Zwiebel—539
Of 1-butene and 2-butene, H. E. Gunning and E. W. R. Steacie—581
Of diethyl ether, B. deB. Darwent, E. W. R. Steacie, and A. F. van Winckel—551
Of isobutene, H. E. Gunning and E. W. R. Steacie —544
Of propylene and isoprene, H. E. Gunning and E. W. R. Steacie—57
Photochemical decomposition of gaseous aluminum trimethyl, Lourdu M. Yeddanapalli and Clarence C. Schubert—1
Photochemical polymerization of butadiene, David H. Volman—467
Photoelectric effect in metal-ammonia solutions, Richard A. Ogg, Jr.—295
Site of reaction in direct photographic development, T. H. James—536
Thallous sulfide photo-conductive cells. I. Experimental investigation, A. von Hippel, F. G. Chesley, H. S. Denmark, P. B. Ulin, and E. S. Rittner—355
Thallous sulfide photo-conductive cells. II. Theoretical discussion, A. von Hippel and E. S. Rittner—370

Photoconductivity
Thallous sulfide photo-conductive cells. I. Experimental investigation, A. von Hippel, F. G. Chesley, H. S. Denmark, P. B. Ulin, and E. S. Rittner—355
Thallous sulfide photo-conductive cells. II. Theoretical discussion, A. von Hippel and E. S. Rittner—370

Polymers
Application of the methods of molecular distribution to solutions of large molecules, Bruno H. Zimm—164
Behavior of macromolecules in inhomogeneous flow, H. A. Kramers—415
Copolymerization of systems containing three components, Turner Alfrey and George Goldfinger—115 (L)
Creep under constant load in tension, Paul J. Blatz and Arthur V. Tobolsky—113(L)
Critical concentration for the formation of micelles as indicated by the absorption spectrum of a cyanine dye, Myron L. Corrin, Howard B. Klevens, and William D. Harkins—216(L)
Determination of particle sizes from Tyndall spectra, W. Heller, H. B. Klevens, and H. Oppenheimer —566(L)
Determination of polymeric molecular weights by light scattering in solvent-precipitant systems, R. H. Ewart, C. P. Roe, P. Debye, and J. R. McCartney —687
Elastic loss and relaxation times in cross-linked polymers, John G. Kirkwood—51
General theory of the reaction loci in emulsion polymerization. II. William D. Harkins—47(L)
Intrinsic viscosity of polymer-solutions, P. Debye—636
Light scattering of high polymer solutions, Jurg Waser, Richard M. Badger, and Verner Schomaker—43
Loci of emulsion polymerization: diffusion of organic molecules from emulsion droplets through an aqueous phase into polymer latex particles, William D. Harkins and Richard S. Stearns—215(L)
Loci of emulsion polymerization: the diffusion of organic molecules from emulsion droplets through an aqueous phase into soap micelles, Richard S. Stearns and William D. Harkins—214(L)
New approach to the theory of relaxing polymeric media, M. S. Green and A. V. Tobolsky—80
Notes on the rate process theory of flow, A. Bondi—591
On the diffusion of vapors through polymers, Paul Doty—244
Photochemical polymerization of butadiene, David H Volman—467
Sedimentation equilibria of polydisperse non-ideal solutes, Michael Wales, Margaret Bender, J. W. Williams, and Roswell H. Ewart—353(L)
Simple method of obtaining a particle mass distribution by inverting the x-ray intensity scattered at small Angles, L. C. Roess—695
Statistical mechanics of linear association equilibria, Paul J. Flory—49(L)
Stress-time-temperature relations in polysulfide rubbers, M. D. Stern and A. V. Tobolsky—93
Tyndall spectra, their significance and application, Wilfried Heller and Etienne Vassy—565(L)

Proteins
Ultra-high frequency denaturation of proteins, George A. Boyd—351(L)

Quantum Mechanics (see **Mechanics, Quantum**)

Radio Chemistry

Chemical forms assumed by C^{14} produced by neutron irradiation of nitrogenous substances, P. E. Yankwich, G. K. Rollefson, and T. H. Norris—131

Investigation of oxidation of copper by use of radioactive Cu tracer, J. Bardeen, W. H. Brattain, W. Shockley—714

New units for the measurement of radioactivity, E. U. Condon and L. F. Curtiss—399(L)

Raman Spectra

Electric circuit models for the vibration spectrum of polyatomic molecules, Gabriel Kron—19

Motions of molecules in condensed systems: I. Selection rules, relative intensities, and orientation effects for Raman and infra-red lines, Ralph S. Halford—8

Network analyzer tests of equivalent circuits of vibrating polyatomic molecules, G. K. Carter and G. Kron —32

Non-planar vibrations of benzene, Foil A. Miller and Bryce L. Crawford, Jr.—282

Refractive Indices

Of soaps and detergents, H. B. Klevens—567(L)

Rotation

Asymmetric rotor. III. Punched-card methods of constructing band spectra, Gilbert W. King, Paul C. Cross, and George B. Thomas—35

Energy levels and thermodynamic functions for molecules with internal rotation. II. Unsymmetrical tops attached to a rigid frame, Kenneth S. Pitzer—239

Relation between internuclear distances and potential barriers of methyl groups, F. A. French and R. S. Rasmussen—389

Solutions (see also **Liquids**)

Absorption spectrum of metal-ammonia solutions, Richard A. Ogg, Jr.—114(L)

Application of the methods of molecular distribution to solutions of large molecules, Bruno H. Zimm—164

Conductometric investigation of electrolytic solutions in hydrocarbons, Andrew Gemant—424

Critical concentration for the formation of micelles as indicated by the absorption spectrum of a cyanine dye, Myron L. Corrin, Howard B. Klevens, and William D. Harkins—216(L)

Critical micelle concentration of anionic soap mixtures, H. B. Klevens—742(L)

Determination of critical concentrations for the formation of soap micelles by the spectral behavior of pinacyanol chloride, M. C. Corrin, H. B. Klevens, and William D. Harkins—480

Determination of critical concentrations for micelle formation in solutions of cationic soaps by changes in the color and fluorescence of dyes, M. L. Corrin and William D. Harkins, 641(L)

Differential entropy of dilution in aqueous solutions of amino acids, A. L. Robinson—588

Effect of solvents on the critical concentration for micelle formation of cationic soaps, M. L. Corrin and Williams D. Harkins—640(L)

Electrical potential at the interface between vitreous silica and solutions of barium chloride, Lloyd A. Wood and Lawrence B. Robinson—251

Electron affinity of amide radical and the chemical stability of metal-ammonia solutions, Richard A. Ogg, Jr.—399(L)

Heats of solution of hexamethylbenzene, cetyl alcohol, and dicetyl in related liquids; heats of fusion by an extrapolation process, George S. Parks and Robert D. Rowe—507

Jones-Ray effect, wettability, and zeta-potential, Hans M. Cassel—462(L)

Light scattering of high polymer solutions, Jurg Waser, Richard M. Badger, and Verner Schomaker—43

Photoelectric effect in metal-ammonia solutions, Richard A. Ogg, Jr.—295(L)

Proposed interpretation of the zeta-potential, Lawrence Robinson—721

Refractive indices of soaps and detergents, H. B. Klevens—567(L)

Simple method of obtaining a particle mass distribution by inverting the x-ray intensity scattered at small angles, L. C. Roess—695

Spectrophotometric studies on solubilization of hydrocarbons, W. Heller and H. B. Klevens—567(L)

Studies on glass. XVIII. The heats of solution of crystalline and glassy glucose; the heat of mutarotation of α-glucose, Robert D. Rowe and George S. Parks—383

Test of Langmuir's interpretation of the Jones-Ray effect, Lloyd A. Wood and Lawrence B. Robinson —258

Time-dependence of boundary tensions of solutions. I. The role of diffusion in time-effects, A. F. H. Ward and L. Tordai—453

Spectra (see **Absorption Spectra, Fluorescence, Raman Spectra**)

Statistical Mechanics (see **Mechanics, Statistical**)

Steric Strain

In compounds with tertiary butyl groups; steric strain in polyisobutylene, Herbert C. Brown and Geraldine K. Barbaras—114(L)

Theory of the racemization of optically active derivatives of diphenyl, F. P. Westheimer and Joseph E. Mayer—733

Surface Phenomena

Absorption isotherms for hydrogen-bonded liquids on charcoal, D. H. Volman and I. M. Klotz—642(L)

Accommodation coefficients for heat conduction between gas and bright platinum, for nine gases between 80°K (or their boiling points) and 380°K, Edward R. Grilly, William J. Taylor, and Herrick L. Johnston—435

Aggregational states in adsorbed films on incompletely wettable solid surfaces, D. H. Bangham—352(L)

Critical concentration for the formation of micelles as indicated by the absorption spectrum of a cyanine dye, M. L. Corrin, H. B. Klevens, and William D. Harkins—216(L)

Surface Phenomena (*continued*)
Critical micelle concentration of anionic soap mixtures, H. B. Klevens—742(L)
Determination of critical concentrations for the formation of soap micelles by the spectral behavior of pinacyanol chloride, M. L. Corrin, H. B. Klevens, and William D. Harkins—480
Electrical potential at the interface between vitreous silica and solutions of barium chloride, Lloyd A. Wood and Lawrence B. Robinson—251
Estimation of the surface area of solid particles, Hans M. Cassel—217(L)
Jones-Ray effect, wettability, and zeta-potential, Hans M. Cassel—462(L)
Nitrogen and steric acid adsorption by supported and unsupported catalysts, Herman E. Ries, Jr., Marvin F. L. Johnson, and John S. Melik—465(L)
Note on the multi-layer postulate of Eversole and Lahr, G. A. H. Elton—463(L)
Pressure dependence of accommodation coefficients, I. Amdur—339
Proposed interpretation of the zeta-potential, Lawrence Robinson—721
Recognition of phase transitions in adsorbed films on solids, D. H. Bangham—352(L)
Sedimentation equilibria of polydisperse non-ideal solutes, Michael Wales, Margaret Bender, J. W. Williams, and Roswell H. Ewart—353(L)
Statistical mechanics of multimolecular adsorption. I, Terrell L. Hill—263
Statistical mechanics of multimolecular adsorption. II. Localized and mobile adsorption and absorption, Terrell L. Hill—441
Surfaces of solids. XVII. First- and a second-order phase change in the adsorbed film of *n*-heptane on graphite, George Jura, William D. Harkins, and Edward H. Loeser—344
Surfaces of solids. XV. First-order phase changes of adsorbed films on the surfaces of solids: The film of *n*-heptane on ferric oxide, George Jura, Edward H. Loeser, Paul R. Basford, and William D. Harkins—117
Test of Langmuir's interpretation of the Jones-Ray effect, Lloyd A. Wood and Lawrence B. Robinson—258
Theory of multimolecular adsorption from a mixture of gases, Terrell L. Hill—268
Theory of multimolecular adsorption from a mixture of gases, Terrell L. Hill—46(L)
Time-dependence of boundary tensions of solutions. I. The role of diffusion in time-effects, A. F. H. Ward and L. Tordai—453

Thermodynamic Properties
Adiabatic compressibility of liquids, M. Rama Rao—699(L)
Density and thermal expansion of liquid phosgene, C. N. Davies—48(L)
Determination of critical concentrations for micelle formation in solutions of cationic soaps by changes in the color and fluorescence of dyes, M. L. Corrin and William D. Harkins—641(L)
Differential entropy of dilution in aqueous solutions of amino acids, A. L. Robinson—588
Effect of solvents on the critical concentration for micelle formation of cationic soaps, M. L. Corrin and William D. Harkins—640(L)
Electron affinity and amide radical and the chemical stability of metal-ammonia solutions, Richard A. Ogg, Jr.—399(L)
Energy levels and thermodynamic functions for molecules with internal rotation. II. Unsymmetrical tops attached to a rigid frame, Kenneth S. Pitzer—239
Force constant of the association bond in the formic and acetic acid dimers, J. O. Halford—395
Heat-capacity lag in gas dynamics, Arthur Kantrowitz —150
Heats of solution of hexamethylbenzene, cetyl alcohol, and dicetyl in related liquids; heats of fusion by an extrapolation process, George S. Parks and Robert D. Rowe—507
Of gaseous boron trifluoride, boron trichloride and boron tribromide, Hugh Spencer—729
Of gaseous 1,3-butadiene and the normal butenes above 25°C. Equilibria in the system 1,3-butadiene, *n*-butenes, and *n*-butane, John G. Aston, George Szasz, Harold W. Woolley, and Ferdinand G. Brickwedde —67
Of liquid argon, O. K. Rice—324
Of solid argon, O. K. Rice—321
On the dissociation energies CO, N_2, NO, and CN, J. G. Valatin—568(L)
On the equation of state for gases at extremely high pressure, P. Caldirola—738
O—O bond energy in hydrogen peroxide, George Glockler and George Matlack—504(L)
Predissociations in nitric oxide, Paul J. Flory and H. L. Johnston—212
Relation between bond force constants, bond orders, bond lengths, and the electro-negativities of the bonded atoms, Walter Gordy—305
Some thermodynamic constants for the solution processes of atoms in metallic solvents, Sheng-Nien Wang—643
Steric strain in compounds with tertiary butyl groups; Steric strain in polyisobutylene, Herbert C. Brown and Geraldine K. Barbaras—114(L)
Studies on glass. XVIII. The heats of solution of crystalline and glassy glucose; the heat of mutarotation of α-glucose, Robert D. Rowe and George S. Parks—383

Thermodynamics
Erratum: "Note on the conditions of equilibrium for systems of many constituents," Stuart R. Brinkley, Jr.—698
Note on the conditions of equilibrium for systems of many constituents, Stuart R. Brinkley, Jr.—563
Sedimentation equilibria of polydisperse non-ideal solutes, Michael Wales, Margaret Bender, J. W. Williams, and Roswell H. Ewart—353(L)

Ultrasonics

Propagation in liquids: I. Application of pulse technique to velocity and absorption measurements at 15 megacycles, J. R. Pellam and J. K. Galt—608

Propagation in liquids. II. Theoretical study of the free volume model of the liquid state, Charles Kittel—614

Valence (see **Mechanics, Quantum**)

Viscosity

Behavior of macromolecules in inhomogeneous flow, H. A. Kramers—415

Intrinsic viscosity of polymer-solutions, P. Debye—636

Notes on the rate process theory of flow, A. Bondi—591

Statistical mechanical theory of transport processes, I. General theory, John G. Kirkwood—180. See also Errata—347

X-Ray Diffraction

Crystal structure of polonium, William H. Beamer and Charles R. Maxwell—569(L)

Crystal structure of synthetic boehmite, Paul P. Reichertz and W. Jacque Yost—495

Investigation of the thermal decomposition of silver oxalate, R. L. Griffith—408

Simple method of obtaining a particle mass distribution by inverting the x-ray intensity scattered at small angles, L. C. Roess—695

Synthetic Patterson maps, A. D. Booth and Dorothy Wrinch—503(L)

Use of punched cards in molecular structure determinations. I. Crystal structure calculations, P. A. Shaffer, Jr., Verner Schomaker, and Linus Pauling—648

Use of punched cards in molecular structure determinations. II. Electron diffraction calculations, P. A. Shaffer, Jr., Verner Schomaker, and Linus Pauling —659
